Revised GDP time series in May 2020

On 29 May 2020, the Swedish GDP and real sector accounts are disseminated for the year 2018. This is part of a new schedule for dissemination of GDP (see below).

At this point in time, the full time series 1950-2017 are slightly revised due to:

- Increased coordination of National Accounts and Balance of Payment statistics.
- Changes due to GNI Action Points.
- Fine-tuning of the model used for balancing GDP.

The revisions will be described in a document found here:

<https://www.scb.se/en/finding-statistics/statistics-by-subject-area/national-accounts/national-accounts/national-accounts-quarterly-and-annual-estimates/>

From 2020 onwards there are changes in the schedule for national dissemination of GDP and real sector accounts:

- Yearly National Accounts are disseminated in May instead of September, together with dissemination of Quarterly Accounts for Q1.
- Quarterly Accounts for Q2 disseminated in late August instead of mid-September.
- The previous flash estimate, that used to be compiled only in July, is replaced by a quarterly publishing of a GDP Indicator at t+35 days.
